EXPERIENCE

Aug 2026 - Present	Software Developer Instituto Estatal Electoral de Nayarit - Migrating a legacy ASP.NET institutional system into a C# .NET REST API using layered architecture inspired by Clean Architecture. - Structured the solution across API, Application, Domain, and Infrastructure layers, separating controller logic, services, interfaces, DTOs, and entities. - Implemented user-module REST endpoints for creation, lookup, and login with ASP.NET Core Identity, Guid identifiers, PasswordHash, and JWT authentication. - Configured Entity Framework Core Code First with Fluent API, migrations, SQL Server, SSMS validation, Identity tables, and descriptive schema updates. - Improved API consistency through dependency injection, generic result responses, Swagger/OpenAPI documentation, LINQ projections, AsNoTracking queries, secure secrets, and proper HTTP status codes.
Aug 2025 - Jun 2026	Backend Developer Atom - Built and maintained serverless backend services with TypeScript, Node.js, AWS Lambda, API Gateway, Amazon SQS, and Serverless Framework. - Designed REST APIs and asynchronous workflows supporting payment processing, webhooks, integrations, and background operations. - Improved production reliability through structured validation, centralized error handling, standardized logging, retry logic, and idempotent processing. - Reduced response time for a payment-method workflow from roughly 7-9 seconds to 3-5 seconds after restructuring backend processing. - Wrote unit and integration tests for critical API endpoints and Lambda handlers, helping prevent regressions across staging and production.
Apr 2025 - Sep 2025	Full-Stack Developer CICESE - Mobile Fitness Application - Built a full-stack mobile application with personalized AI-generated workout routines, timers, authentication, and progress tracking. - Developed a REST API with Node.js, Express, and MySQL using layered architecture and an eight-entity relational schema. - Created the React Native frontend and integrated AsyncStorage, Axios, authentication flows, and service/API validation tests.
Oct 2025 - Dec 2025	Product & UI/UX Designer CICESE - Tzuku - Delivered 20+ high-fidelity screens and interactive prototypes for a monitoring and activity-tracking mobile application. - Defined user flows, API endpoint specifications, and data models to align product requirements with backend implementation needs.
Mar 2023 - Jun 2023	Java Developer Academic Project - Built a Java Swing desktop system covering role-based access, products, providers, inventory, invoices, sales, returns, tickets, and cash closing. - Designed a MySQL relational database and used JDBC to implement CRUD screens, inventory updates, sales workflows, and reporting.

TECHNICAL SKILLS

Languages	C# - TypeScript - JavaScript - SQL - Java - Python (familiar) - HTML/CSS
Backend And APIs	.NET - ASP.NET Core Web API - Node.js - Express - REST APIs - Webhooks - Asynchronous workflows - Serverless architecture - JDBC
Databases	SQL Server - MySQL - DynamoDB - MongoDB - Entity Framework Core - LINQ
Cloud And Tools	AWS Lambda - API Gateway - Amazon SQS - CloudWatch - Swagger/OpenAPI - Visual Studio - Git/GitHub
Frontend And Practices	React Native (Expo) - CI/CD - Unit/integration testing - Debugging - Logging - Documentation

EDUCATION

Aug 2020 - 2025	Bachelor's Degree in Computer Systems Engineering Instituto Tecnológico de Tepic - Weighted GPA: 90.75/100 Coursework: Software Engineering, Web Development, Databases, Object-Oriented Programming.
-----------------	--

LANGUAGES

Spanish: Native speaker English: C1

INTERESTS

- Cloud architecture - Distributed systems
- Observability - AI-enabled products
